

Brain Digital Twins in Ataxia

Atax-BDT

Marta Gaviraghi, Claudia Casellato, Egidio D'Angelo, Fulvia Palesi

AIM

Creating a **Digital Brain Twin for Ataxia**: simulating brain activity in specific pathological conditions using a multiscale approach.

Microscale

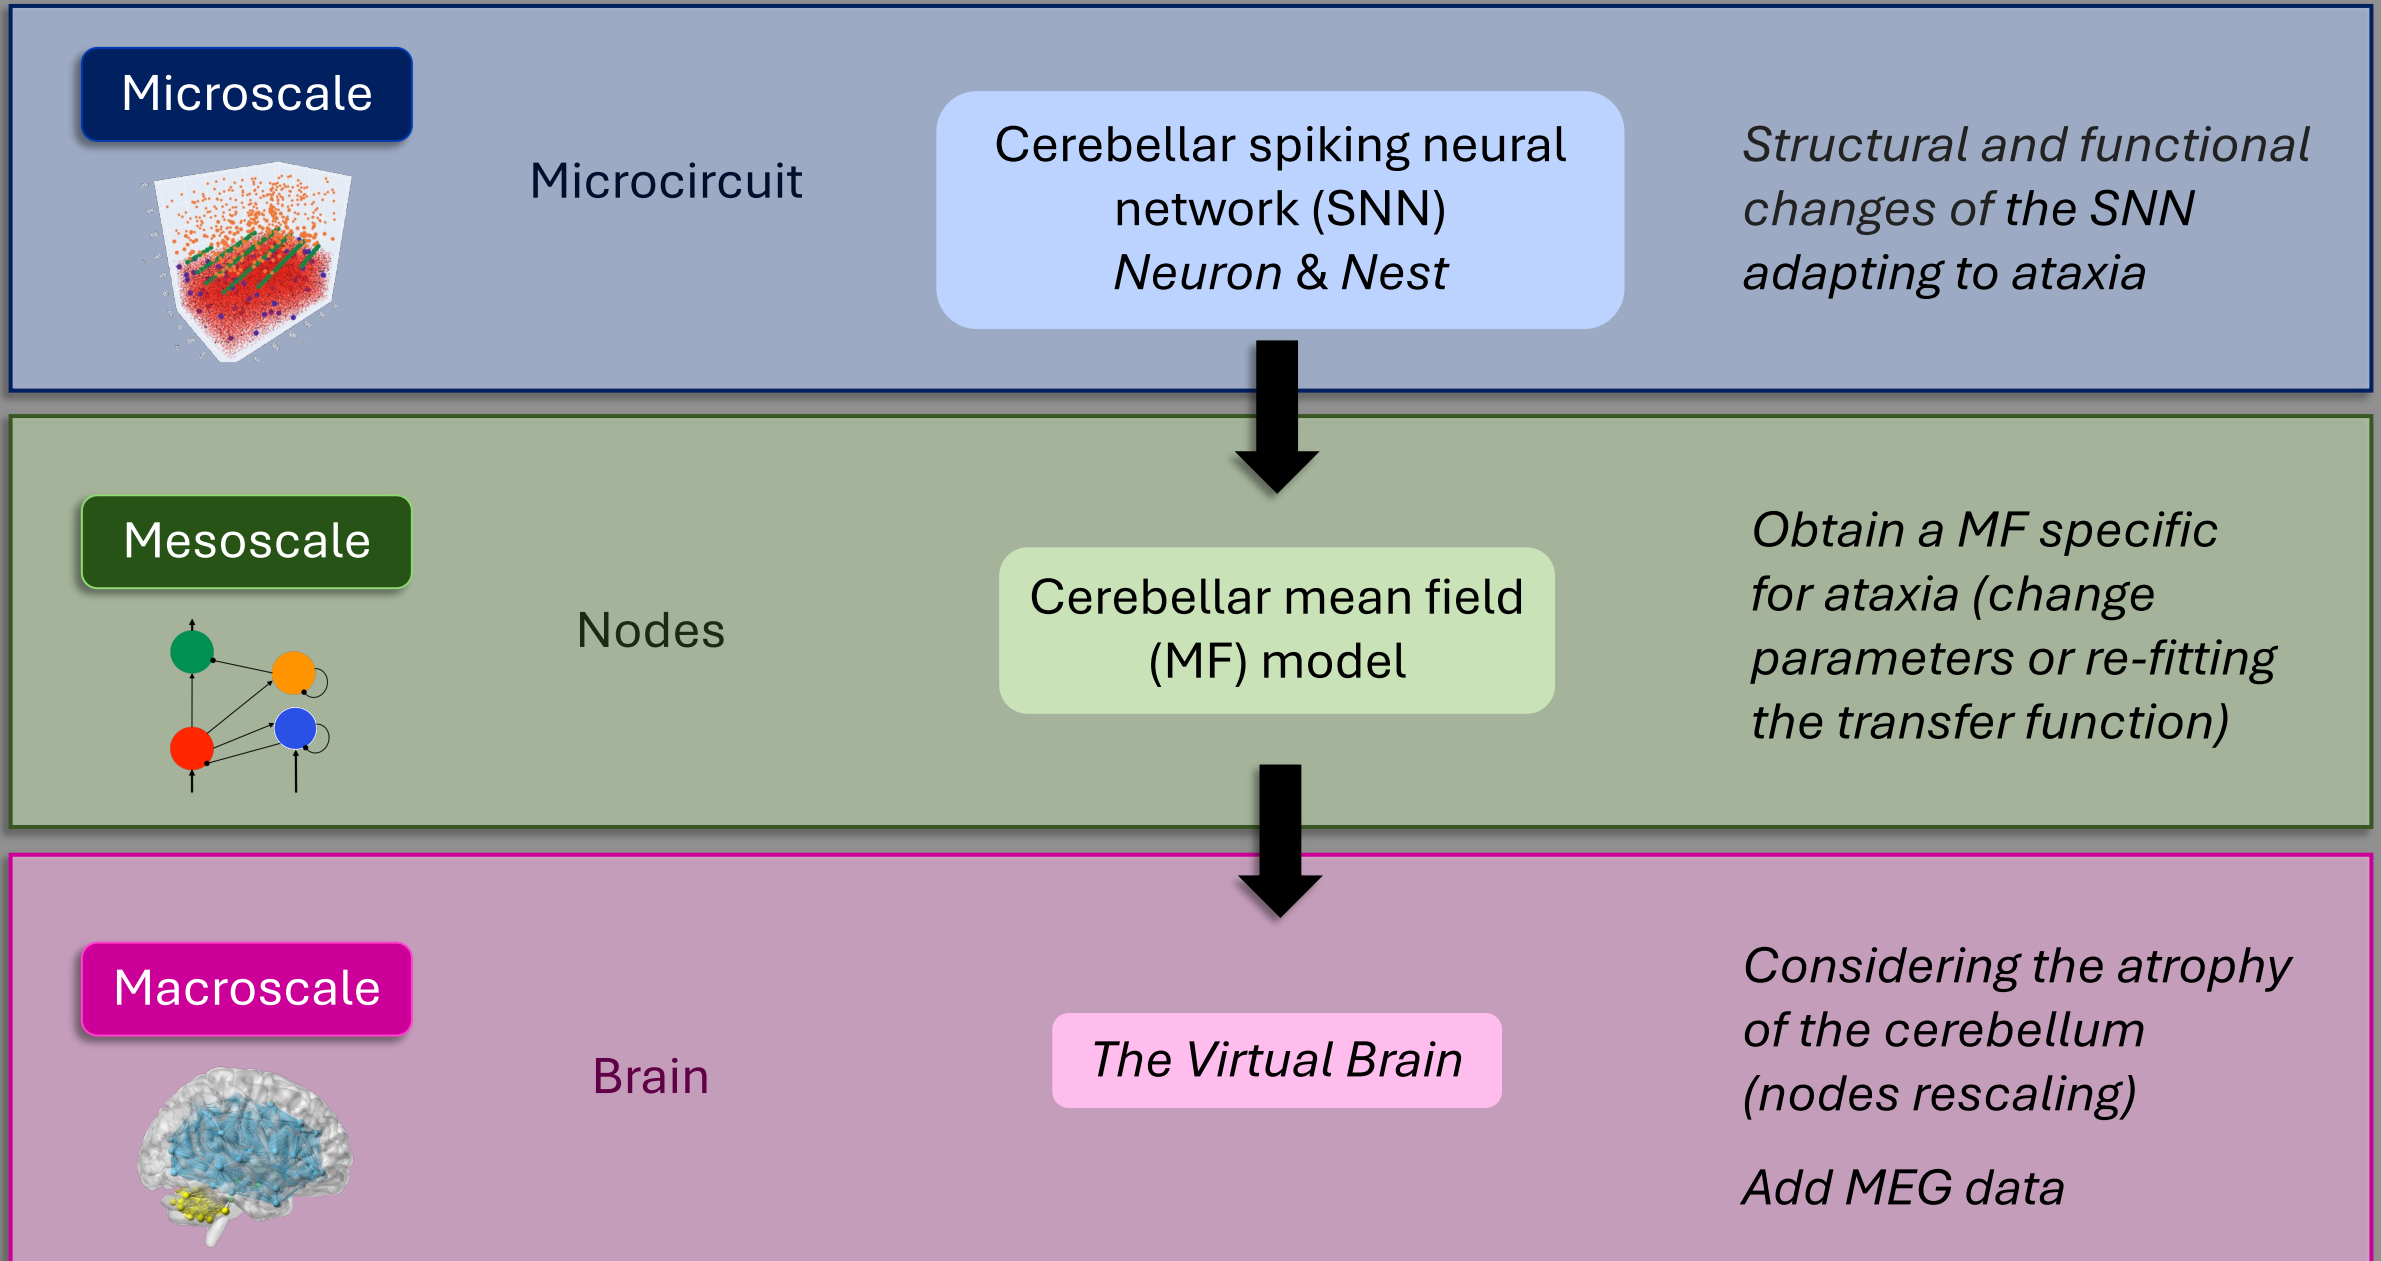

Mesoscale

Macroscale

Brain digital twins in ataxia - *Multiscale workflow*

JOUBERT SYNDROME (JS)

JS is a rare **autosome** recessive syndrome
(1:80 000-1:100 000)

over 40 distinct mutations

All the identified genes encode for proteins
of the primary cilium: ciliopathy

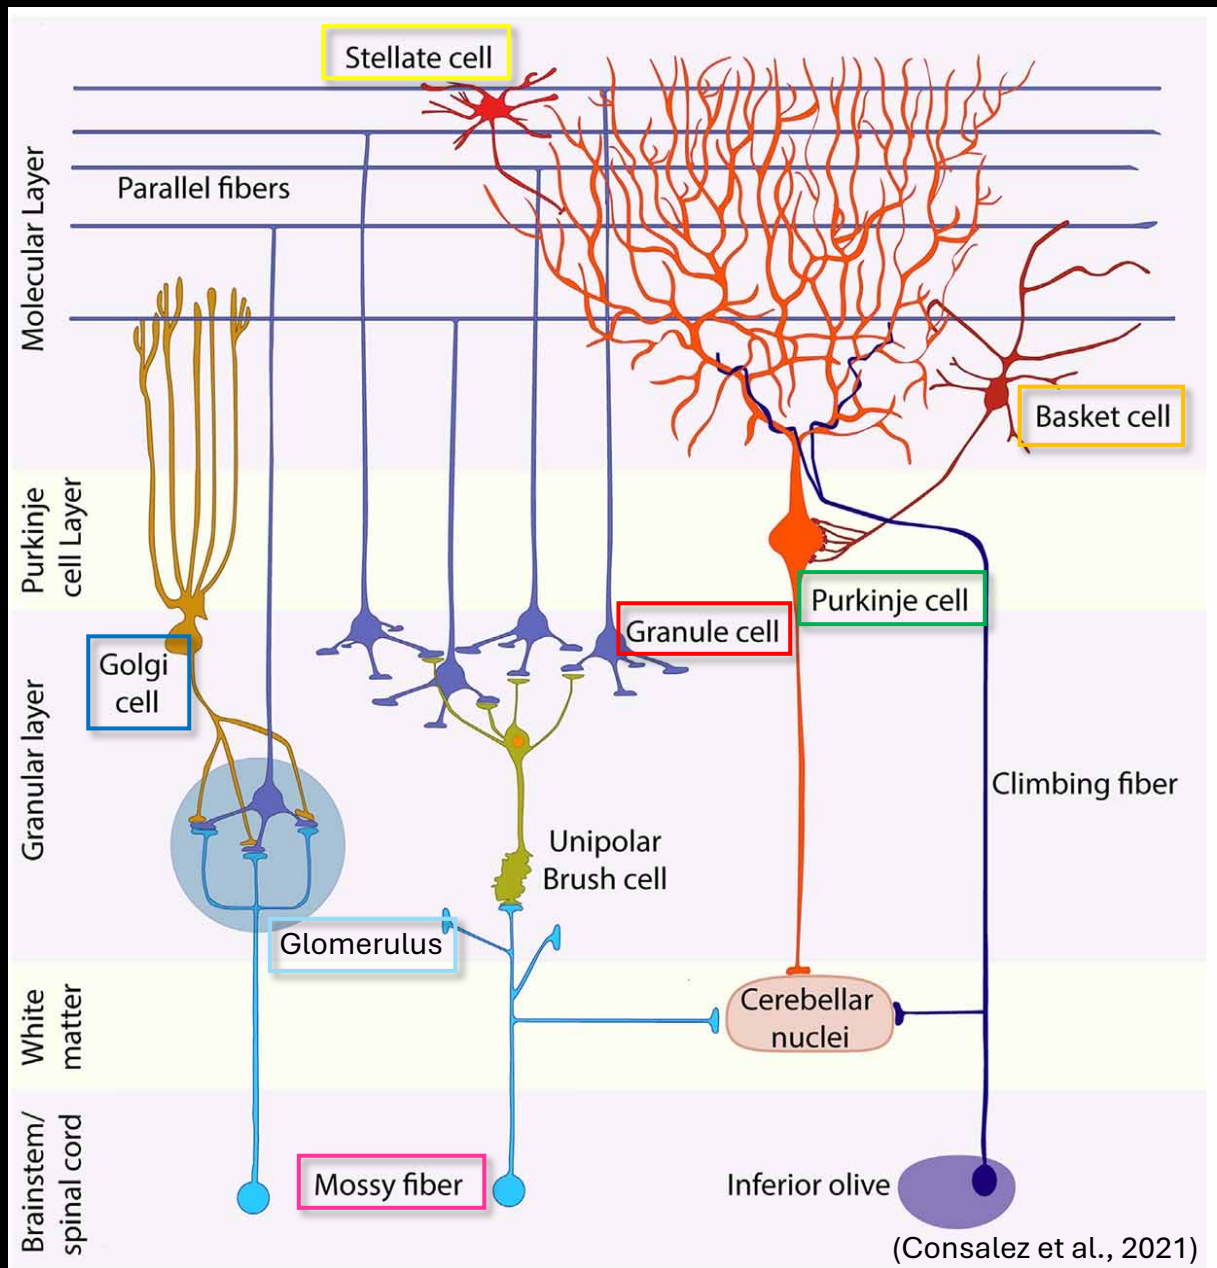

Mutated genes have been linked to altered
Sonic Hedgehog (shh) signalling.

ALTERATIONS

WHO	WHAT
Vermis	Aplasia/hypoplasia
Granule cell (GrC)	Density reduced (50%)
Purkinje Cell (PC)	Density reduced (50%), heterotopic
Dentate nuclei	Fragmented
Cerebellar cortex	Hypoplastic

CEREBELLUM CIRCUIT & SIMULATION

(Consalez et al., 2021)

(<https://www.ebrains.eu/tools/bsb>)

- MOSSY FIBER
- GLOMERULUS
- GRANULE CELLS
- GOLGI CELLS
- PURKINJE CELLS
- BASKET CELLS
- STELLATE CELLS

THE FIRST SIMULATIONS

BSB

SIMULATION DETAILS

Network size:
[300 μm , 295 μm , 200 μm]

Basal activity:
Background noise at 4 Hz

01

Healthy control case

02

50% reduction in granular
cell (GrC) density

Mean estimated firing rate for mossy (kernel width = 25.0 ms)

Mean estimated firing rate for gloms (kernel width = 25.0 ms)

Mean estimated firing rate for granule (kernel width = 25.0 ms)

Mean estimated firing rate for golgi (kernel width = 25.0 ms)

Mean estimated firing rate for purkinje (kernel width = 25.0 ms)

Mean estimated firing rate for stellate (kernel width = 25.0 ms)

Mean estimated firing rate for basket (kernel width = 25.0 ms)

mossy 117
granule 30077
purkinje 27
basket 150

gloms 2322
golgi 70
stellate 297

Mean estimated firing rate for mossy (kernel width = 25.0 ms)

Mean estimated firing rate for gloms (kernel width = 25.0 ms)

Mean estimated firing rate for granule (kernel width = 25.0 ms)

Mean estimated firing rate for golgi (kernel width = 25.0 ms)

Mean estimated firing rate for purkinje (kernel width = 25.0 ms)

Mean estimated firing rate for stellate (kernel width = 25.0 ms)

Mean estimated firing rate for basket (kernel width = 25.0 ms)

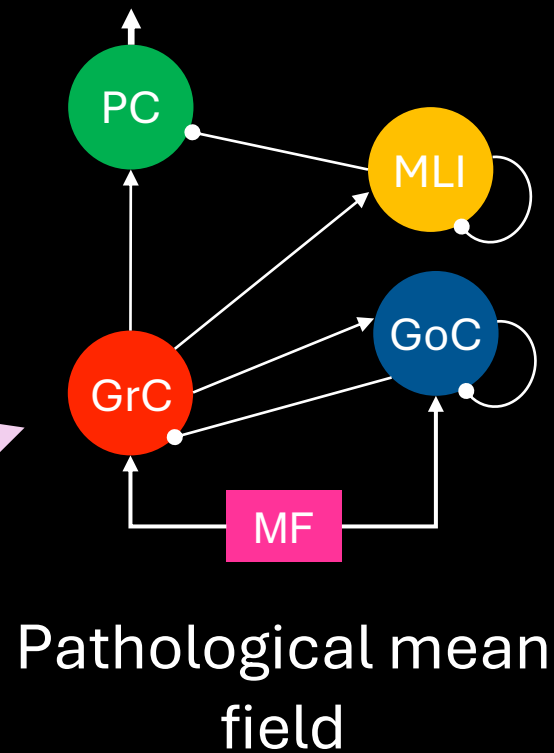

mossy 117
granule 15168
purkinje 27
basket 150

gloms 2322
golgi 70
stellate 297

FUTURE STEPS

Pathological cerebellar spiking neural network (SNN)

The Virtual Brain (TVB)
personalization

RAC request approved June 7
